

The basic idea behind stable diffusion prompts is to use a large, pre-trained language model as a "prompt" to guide the generation of image. The prompt is a sequence of words or phrases that provides context and structure for the generated text. The image generator then uses this prompt to produce output that is coherent and consistent with the prompt.

Sample prompt: [Beautiful] portrait of yasht standing at (night), neon lighting, grim, in the style of artgerm, gerald brom, atey ghailan and mike mignola, comic art, minimalism, vibrant, HD

Subject: Person, animal, landscape
